Silicon in the mix works better than a foliar spray or liquid drench

Plants grown with RESiLIENCE® in the mix flowered earlier, had better root growth and resisted wilt longer* than plants grown with liquid potassium silicate products – whether they were applied as a drench or foliar spray.

And since RESiLIENCE® is already in the mix, silicon is provided to plants from the very beginning and throughout the crop cycle saving you time, labor and money!

Better Root Growth

Week 13: 5 weeks after transplant

Thicker Stem Diameter

Week 47: 7 weeks after sowing seeds liquid drench

Earlier Flowering

Week 51: 11 weeks after sowing seeds

Increased Wilt Resistance

4 days after last watering

* Results will vary by the kind of plant you grow and how you grow it.

It's *already* in the mix™
